ARMADA is a 3-year research study investigating a new set of tests about memory and thinking on an iPad. We are interested if these tests can detect early signs of cognitive decline. Several sites around the United States are helping validate these tests developed by Northwestern University.

Colleen Mellert at (608) 263-6561 or cmellert@medicine.wisc.edu

Help us try out new iPad tests to determine if they can detect early memory and thinking changes!
Participants will come to the University Hospital in Madison for 5 to 6 hours, once a year for up to 3 years to complete cognitive, motor, and sensation tests, as well as answer questions about emotions.

**What is involved?**

This is a unique chance to help develop tests that will provide early diagnosis of Alzheimer's disease.

You will receive $100 for the completion of each visit, and compensation for travel will be available in some cases.

**Participants must be:**
- In good health
- Able to live relatively independently
- Fluent in English
- Able to identify a study partner or someone who can answer some questions about how you are doing

**Who can participate?**

We are looking for adults:
- 65 years old or older with a diagnosis of Alzheimer’s disease
- Who are African American and 65 years old or older with a diagnosis of Mild Cognitive Impairment

**Why participate?**

This is a unique chance to help develop tests that will provide early diagnosis of Alzheimer's disease.

You will receive $100 for the completion of each visit, and compensation for travel will be available in some cases.

These tests include:
- Memory and thinking tests
- Balance and gait tests
- Vision and hearing tests
- Odor tests
- A saliva collection
- A health assessment
